

Aaron McKee

CTO

Aaron McKee is a seasoned technology executive with a history of building products at the intersection of big data and machine learning. With 25 years of professional experience in the technology sector, and almost a decade as an executive, he's helped companies, teams, and products across every stage of maturity and across a range of industries. He helped break web server performance records at Intel and launched the first modern local search product at Ask.com. As CTO of Struq, a performance advertising technology company later acquired by Quantcast, he was one of the first to bring a deep use of machine learning to dynamic content personalization and programmatic advertising. Aaron has also served as CTO of both Skimlinks and Job Today, both sector-leading consumer and business-facing marketplace companies.

Outside of work, Aaron spends as much free time as possible with his family - a wife and two young sons - traveling, eating, and generally being a nerd. He graduated with distinction from the University of California, Berkeley with a dual degree in Computer Science and Psychology and has split his career across both Silicon Valley and Europe.
